Professional Summary

Junior full stack developer. I design, build and deploy my own applications: Python backends with FastAPI, JavaScript web interfaces and native Android apps in Kotlin and Java, backed by automated tests, Docker and GitHub Actions CI. I built **Marea**, an OCR-based inventory and invoice prototype born from real problems at the hotel where I work, and **Aqua**, a cloud AI assistant I use every day. I am a Programmer Analyst student at Duoc UC, with four prior years of Computer Science Engineering studies at UNAB.

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, Kotlin, SQL, HTML, CSS

Backend and APIs: FastAPI, Node.js, REST APIs, JSON, webhooks, OAuth authentication, role-based access control (RBAC)

Frontend and mobile: React, vanilla JavaScript, native Android (Kotlin with Jetpack Compose, Java), React Native

Databases: SQLite, Oracle SQL, PostgreSQL, MySQL, relational data modeling

DevOps and tools: Git, GitHub Actions (CI/CD), Docker Compose, Linux, AWS (Lightsail, EC2), Tailscale, pytest, Postman, advanced Excel

AI and automation: LLM integration (Claude, OpenAI GPT), AI agents, OCR with Tesseract, n8n

Fundamentals: Object-oriented programming, algorithms and data structures, software engineering, cybersecurity

Professional skills: Teamwork, project management, requirements gathering, user support

Projects

Marea – Inventory and Invoice Management System

Working prototype in development · Python, FastAPI, SQLite, JavaScript, Kotlin, Tesseract OCR

- Independently designed and built a web and Android application to solve inventory problems I identified at the hotel where I work (invoice backlogs, mismatched stock counts and email-based ordering), complementing the Novohit PMS.
- Implemented batch invoice reading (photos, PDFs and Chilean electronic invoice XML files) with local Tesseract OCR, duplicate detection, invoice total validation and per-supplier unit conversion.
- Built a FastAPI REST API with inventory by department, an order approval workflow, physical stock counts, Excel and PDF export, a dashboard with 7- and 30-day forecasts, and 6-role access control with PBKDF2 hashing, expiring sessions and login rate limiting.
- Developed a native Android app in Kotlin with Jetpack Compose that consumes the API over HTTPS.
- Wrote 133 automated pytest tests covering the API and database.

Aqua – Multi-platform AI Personal Assistant

In continuous development and daily use · Python, Docker, AWS Lightsail, JavaScript, Java (Android), SQLite, n8n

- Designed and deployed, and currently maintain, a personal AI assistant on AWS Lightsail with Docker Compose, which I use daily for studies, work and finances.
- Built four interfaces: a Telegram bot, a mobile web app, a desktop app with an animated canvas widget and a repurposed Echo Show 5 running a native Android app in Java with local wake-word detection (Vosk).
- Orchestrated specialized agents (research, programming, alerts and web browsing with Chromium) with mandatory human approval for sensitive actions.
- Integrated third-party APIs: Spotify, Google Calendar (OAuth), Open-Meteo and Brave Search.
- Set up CI with GitHub Actions, monitoring with Uptime Kuma, a private network with Tailscale and automated nightly backups.

Education

Programmer Analyst (Analista Programador) – Duoc UC, Viña del Mar | 2025 – present

In progress, expected graduation 2027

- Current courses: Object-Oriented Development (Java), Applied Databases I (Oracle SQL), Applied Mathematics and Elementary English I.

Computer Science Engineering (Ingeniería Civil Informática) – Universidad Andrés Bello | 2021 – 2025
4 years completed, degree not finished

- Relevant coursework: Web and Mobile Development, Databases, Algorithms and Data Structures, Software Engineering.

Work Experience

Waiter – Hotel and Restaurant Industry | 2021 – present

- Provide table service to guests and support daily restaurant operations.
- Automated staff scheduling and shift planning with Excel spreadsheets.
- Troubleshoot issues and support coworkers on Methodo (restaurant management software) and Novohit (hotel PMS).
- Identified inventory control problems at the hotel, which led to my Marea project.

Languages and Availability

Spanish: native · English: basic · Available immediately, with a flexible schedule around classes.
